

Methodology Document

25 Target Companies Research

Objective

The objective of this project is to identify 25 Indian companies that closely match the DeepThought Federer Ideal Customer Profile (ICP). Each company is evaluated using the eligibility gates (E1 and E2) and the Federer scoring framework (C3–C8). Research Scope City Selection: One manufacturing hub is selected based on the assignment. Industry Selection: One or two approved specialty manufacturing segments are chosen.

Target: Identify 25 qualified companies after researching a larger pool of companies.

Research Process

1. Build an initial list of companies from industry directories, government databases, trade expos, LinkedIn, company websites, and business databases.
2. Verify Eligibility Gate E1 (Producer) and E2 (Accessible).
3. Remove traders, distributors, service-only companies, PE-controlled firms, companies above the revenue limit, inactive firms, and companies without a meaningful website.
4. Collect evidence from company websites, annual reports, LinkedIn, certifications, news, and public filings.
5. Score each company on C3–C8 using Weak, Moderate, or Strong ratings.
6. Calculate the Federer Score (0–100) and classify companies into A, B, C, or D bands.
7. Record one personalized outreach hook based on recent verified company information.

Data Sources

- Official company websites
- Annual reports and investor presentations
- Ministry of Corporate Affairs (MCA)
- BSE SME / NSE Emerge
- DSIR recognized R&D; list
- USFDA / EU-GMP databases

- Industry association directories
- LinkedIn and public job postings
- Recent news and press releases

Quality Assurance

Every shortlisted company is manually reviewed to verify evidence. Borderline companies require additional validation before inclusion. Duplicate companies are removed and findings are cross-checked using multiple public sources
